Strahman Piston-Type Sampling Valves comply with the Pressure Equipment Directive (PED) No. 97/23/EC under SEP. Strahman Drain Valves 3" NB through 12" NB ANSI classes 150, 300, and 600 and 2" NB ANSI classes 300 and 600 comply under Category II liquid service.

Quik™ Sampling Valve

The innovative Quik Sampling Valve (QSV-700) was designed specifically for industrial applications that require precise sampling control and operator safety. The QSV-700 combines a Linear Rising Valve Stem with quarter-turn actuation. The QSV-700 has an ANSI Class 600 Body Rating.

The unique QSV-700 soft-seat design and the bubble tight shut-off with live loaded packing is rated to ANSI Seat Leakage Class VI to assure leak-free service. The valve features a spring-loaded and fail-close safety design. The self-contained manual hand actuator with an ergonomic handle features multiple positions for control.

- 45 degree outlet for larger flow capacity
- Piston stem end breaks through any crust or scale that forms
- 316 Stainless steel body is standard – available in the following materials:
 - ◆ Alloy 20
 - ◆ Hastelloy B or C
 - ◆ Titanium
 - ◆ Nickel
 - ◆ Monel
 - ◆ Inconel
- Other stainless steels and materials available on request
- Body extensions can be customized for special applications and installations up to 6"
- Couplings, tees, and adapters allow a wide variety of installation possibilities
- Standard and custom body extensions are available to unclog almost any depth of piping dead space

- Strahman offers a wide range of product options that provide great flexibility of choice to the user. These options are:
 - ◆ Inlet and outlet connections can be threaded, flanged, or socket welded
 - ◆ Connections can be US Standard, DIN, BSP, JIS or other
 - ◆ Actuation can be hand, electric actuator or pneumatic (Standard ISO 150 5211 F5 mounting)
 - ◆ Local and remote position indication available
 - ◆ Positioners available
 - ◆ Sampling bottles, flushing connection and other accessories are available upon request

Please refer to page 4 for pressure and maximum temperature ratings for 316 stainless steel. Pressure and temperature ratings are in accordance with ASME B 16.34 pressure class 600. For pressure/temperature ratings in other materials consult Strahman Valves.

NOTE: Minimum temperature -328°F (-200°C)
Maximum temperature 450°F (232°C)

This U.S. made valve has a wide range of industrial applications for a variety of sampling needs. It can be used for injection service (reverse flow) of process chemicals, cleaning agents and other applications. It is best suited for handling fluids that do not have suspended solids that can be lodged under the seat.

NOTE: When installing a Quik Sampling Valve, use only a Strahman half coupling; use of any other coupling may affect performance.

The Original Piston-Type Sampling Valves

Cannot Clog – Does Not Leak

Since 1921, Strahman Valves Inc. has been a Pioneer and Leader in the Sampling Valve Industry by first developing the Piston-Type Sampling Valve series. The unique design of dual sealing rings at the time was truly innovative and set Strahman apart from other valve companies. The quality and integrity of manufacturing excellence has provided Strahman customers with a long lasting, reliable product that work for years with trouble free performance.

Visit our website at www.strahmanvalves.com and learn more about the Strahman product line that differentiates us from other manufacturers of Sampling Valves.

- Piston moves through the valve clearing out any material that may harden
- Piston extension breaks through any crust or scale that forms
- Dual sealing ring arrangement keeps the valve from leaking to the atmosphere
- No dead spot – piston completely fills the valve interior
- Always gives a live sample – new product is introduced into the sampling area when the piston retracts
- Opening indicator provides operators clear and simple indication of the valve position
- 316 stainless steel body is standard – available in the following materials:
 - ◆ Alloy 20
 - ◆ Hastelloy B or C
 - ◆ Titanium
 - ◆ Nickel
 - ◆ Monel
 - ◆ Inconel
 - ◆ Other stainless steels and materials available on request
- Body extensions can be customized for special applications and installations
- Couplings, tees, adapters and inserts allow a wide variety of installation possibilities
- Standard and custom piston extensions are available to unclog almost any depth of piping dead space
- Strahman offers a wide range of product options that provide great flexibility of choice to the user. These options are:
 - ◆ Inlet and outlet connections can be threaded, flanged, or socket welded
 - ◆ Connections can be US Standard, DIN, BSP, JIS or other
 - ◆ Actuation can be hand crank, handwheel, gear operator, electric actuator or cylinder actuator (air or hydraulic)
 - ◆ Local and remote position indication available
 - ◆ Positioners available
 - ◆ Sampling bottles, flushing connection and other accessories are available upon request

Pressure and temperature ratings are in accordance with ASME B16.34 pressure class 600. See below for 316 & 316L stainless steel material. For Pressure/Temperature ratings in other materials consult Strahman Valves.

NOTE: Maximum temperature allowable for 316L

Sampling Valve with Opening Indicator

To keep abreast of our customers' requirements, Strahman Valves, Inc. includes an OPENING INDICATOR on its line of hand operated Piston-Type Sampling Valves (on all models up to 6" piston extensions*). The indicator shows the operator of the valve that the product, which is normally under pressure, is in position to start flowing through the valve and tells him to be cautious and open the valve slowly so there will not be a sudden surge of product.

The INDICATOR is attached to the valve directly under the valve handle and extends up the side of the bonnet. When the valve is in the fully closed (extended) position the indicator extends beyond the upper edge of a raised ring on the bonnet, which is marked "OPENING."

As the operator turns the valve handle counter-clockwise, the indicator lowers as the piston is being retracted to the fully open position. When the tip of the indicator is flush with the upper edge of the "OPENING" ring on the bonnet it is indicating that the piston is moving through the sealing ring and the product is ready to flow through the valve. At this point, the operator should turn the handle slowly to avoid any sudden burst of product which would be under pressure.

*not available on valves above 6" piston extensions.

AVAILABLE ON MODELS

SV-500 3/4" x 1/2"	SV-700 3/4" x 1/2"
SV-600 1/2" x 3/8"	SV-800 1" x 3/4"
SV-700 FLG	SV-800 FLG
SV-900	SV-1000

- 1 No dead spot – piston completely fills valve and extends to inner surface of pipe
- 2 Always gives a live sample
- 3 Open-piston is retracted into body allowing full free flow
- 4 Valve is kept tight by two compressible valve rings

PISTON-TYPE SAMPLING VALVE SPECIFICATION

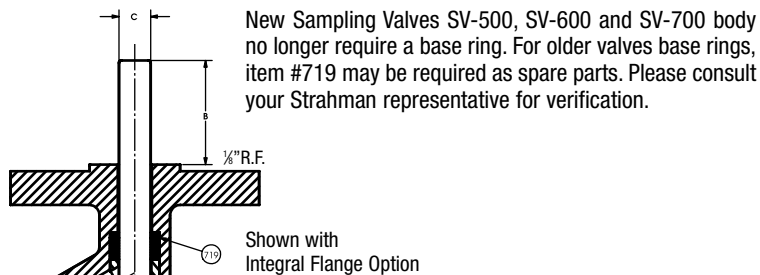

The Sampling Valve shall be a Model SV700 3/4" MNPT inlet* by ___" FNPT (1/2" or 3/4") outlet*. The body shall be investment cast 316 stainless steel and internals of 316 SS fabricated wetted parts. The valve shall be a soft seat design of Teflon that shall meet ANSI Class VI, bubble tight shut off. The piston shall have linear travel with a rising stem with multi-turn handle for manual operation, or a pneumatic or hydraulic cylinder for automatic operation. The piston shall completely fill the valve interior allowing for no cavities (dead space), the valve will be self-pigging and will not clog. The Sampling Valve will insure new product samples are always taken with no prior sample material remaining. The piston shall have a ___" extension that shall extend beyond the threaded inlet to break through any product crust insuring proper sample flow.

*Also available with Flanged, or SW inlet and outlet connection. For other Sampling Valve Models refer to the size tables.

Sampling Valves SV-700 & SV-800 FLG with Integral Inlet Flange

Integral Flange Sampling Valves

Strahman Valves can supply flanged connections on any sampling valves. For applications where welded flanges are prohibited, Strahman offers investment cast valves that features an integral flanged inlet and female threaded outlet. This option is available on a limited range of valve models.

Integral Flanged Valves are available in the following sizes and ANSI Flange Ratings:

- ¾ SV-700 Class 150#, 300# and 600#
- 1" SV-700 and SV-800 150# only

All other sizes and flange ratings are available in 316L Stainless Steel body with a flange fitted and backwelded to the inlet. The flange rating can not exceed the ANSI 600# rating of the body.

The Valve Raised Face is ⅛" standard and ⅙" available upon request. The Adapter is recessed to facilitate the piloting of the valve, as shown in the diagram on page 11. Strahman can provide a mating flange nozzle, or an adapter that has a female recess to match the male raised face of the Strahman Valve. This insures that the valve and flange are concentric and that no scoring of the piston occurs on the inside of the nozzle that may cause the valve to leak.

CAUTION: If there is no proper recess in the mating flange as supplied by the customer, or no Strahman Nozzle or Adapter is supplied there must be a required ¼" clearance between the outside diameter of the piston and the inside diameter of the nozzle. The following chart is a guide of proper measurements to prevent scoring of the piston. Strahman Adapters are shown on page 11.

Valve Type	Piloting Diameter 150#, 300# & 600# – see E	Piston Diameter	Nozzle Bore with Piloting – see C	Nozzle Bore without Piloting – see C	Piloting Depth 150/300#* – see D	Flange Thickness 150#*	Flange Thickness 300/600#*
SV-500 (½")	1.379"	.243	.293	.493	⅛"	1"	1"
SV-600 (½")	1.379"	.368	.418	.618	⅛"	1"	1"
SV-700 (¾")	1.692"	.590	.640	.840	⅛"	1"	1⅛"
SV-700 (1")	2.004"	.590	.640	.840	⅛"	1"	1⅛"
SV-800 (1")	2.004"	.787	.837	1.037	⅛"	1"	1⅛"
SV-900 (1¼")	2.504"	.984	1.034	1.234	11/64"	1"	1⅛"
SV-1000 (1½")	2.879"	1.181	1.233	1.431	11/64"	1"	1⅛"

*600 lbs. = ¼" all sizes

SPECIAL NOTE – ALL NOZZLES

Where required, give pipe size and schedule or tank wall thickness and radius.

PED Compliant

Sampling Valve Adapter

The standard adapter for sampling valves is constructed of 316 stainless steel, but available in other custom alloys. The adapter is positioned between the existing nozzle and the piston of the valve. The OD (outside diameter) of the adapter conforms with the ID (inside diameter) of the nozzle and ID of the adapter conforms with the OD (outside diameter) of the piston. The adapter fills the space between the nozzle and piston for a snug fit, this accommodates an accurate alignment and reduces gouging of the piston.

The sampling adapter prevents the possibility of process fluid from collecting around the piston and hardening, causing binding and making operating the valve difficult. In addition, no particles can lodge in the space between the nozzle and the piston that could damage the piston.

Misalignment of the valve during installation can cause scoring damage to the piston. Misalignment can come from the clearance holes of raised face flanges which can cause the sampling valves to be as much as $\frac{1}{4}$ " out of alignment. If the nozzle diameter is not large enough, the piston can rub against the nozzle causing the nozzle to scratch and damage the valve piston. The adapter provides piloting that aligns the nozzle and the piston as shown on page 10.

Special option: For special applications the nozzle or adapter can be supplied with a Teflon liner for a tight fit.

PED Compliant

Half Couplings and Special Tees

Half Couplings

Contoured and Non-Contoured Couplings

Strahman Couplings slide into a hole drilled in a pipeline and a socket weld type weld is used to attach it to the pipe. Contoured couplings (shown below) are normally used for smaller pipe sizes up to 6". Contouring of the coupling allows it to match the inside of the pipe and not obstruct flow. The contour should be installed in line with the pipe. Non-contoured couplings can be supplied for pipe sizes 8" and above, but normally the non-contoured couplings (shown below) are used because there is little obstruction of flow.

HALF COUPLING INSTALLATION INSTRUCTIONS

The Sampling Valve inlet connection should be flush with the contour of the half coupling, AFTER WELDING INTO PIPE OR VESSEL, to assure proper satisfactory operation of Sampling Valve. To ensure proper installation and sealing of threaded connection, retapping of the half coupling may be necessary to correct distortion caused by welding.

SPECIAL NOTE – ALL HALF COUPLINGS

Dimension X – Pipe size and schedule number or tank wall thickness. Please specify when ordering. Couplings for wall thickness greater than those shown above available and priced on request.

Model	F	G NPT	Maximum Wall Thickness
SV-500	1 1/2"	3/8"	1/2" Cont. 1/16" Non-Cont.
SV-600	1 1/2"	1/2"	1/2" Cont. 1/16" Non-Cont.
SV-700	1 1/2"	3/4"	1/2" Cont. 1/16" Non-Cont.
SV-800	1 3/4"	1"	1/16"
SV-900	2 3/2"	1 1/4"	13/16"
SV-1000	2 5/16"	1 1/2"	7/8"

Socket Weld and BSP Threaded half couplings are also available.

CONTOURED
THRU 6" PIPE

NON-CONTOURED
ABOVE 6" PIPE

Special Tees

Quick Disconnect Tee with Sampling Valve

Special Tee for pipe or tubing below L DIM where required, give actual pipe size and schedule.

SV-500, SV-600 & SV-700 special tee required for pipe size under 2".

SV-800, SV-900 & SV-1000 special tee required for pipe size under 3".

PED Compliant

Available with SV-500, SV-600, SV-700 & SV-800.
Also available with air cylinder.

Jacketed tees are supplied for installation into a process line with a steam jacket. Customer must specify the core pipe size and schedule along with the jacket pipe size and schedule. This determines the size and length of the extended coupling.

Example: 3" sch. 40 core with 4" sch. 10 jacket.

PED Compliant

Insert with Sampling Valve Models SV-500, SV-600, SV-700, SV-800, SV-900, SV-1000

For use in Pipeline Installations

For use with Ram-Type Drain Valves a recess is required. Use piloting dimensions as discussed on page 10.

Special Extended Crank Handle and Gear Operator Options

Front and Side View Shown:
Gear Box with easy turn hand wheel

Special Strahman Extended Sampling Valve Crank Handle can be furnished in lengths from 16 in. to 10 ft. The Extended Crank Handle can be furnished for use on any sampling valve now in service, by removing the original crank handle and replacing it with an extended crank handle in the length required.

PED Compliant

Heat Jackets for Sampling Valves

1 Piece Jacket Available for SV-500, SV-600, SV-700 & SV-800

Pressure	300 PSI
Temperature	600°F

(1/2" FNPT connections standard)

Bolt On Heat Jackets offer superior performance and reliability for a cost competitive price. CSI Heat Jackets are cast to conform precisely to the Strahman sampling valve body so that there are almost no air gaps. The special aluminum based alloy acts as an efficient heat transfer agent to evenly distribute heat throughout the valve body ensuring no cool spots. A carbon steel ASME coded pressure vessel chamber contains either steam, or heat transfer fluid.

Standard Design is a two-piece bolt on jacket; single piece designs are available for certain sizes and configurations. For flanged valves, the casting is shaped to envelope the flange, so that there is absolutely no exposed surface area where cooling may occur. Compared to a fabricated jacket that is welded to a valve, the bolt on jacket is much more compact and efficient.

BENEFITS OF THE BOLT ON JACKET VERSUS THE WELDED TYPE ARE:

- No dissimilar metals welded together (carbon steel jacket on stainless steel valve body).
- No distortion of the valve body due to welding (heat) that can affect the piston travel.
- No heat affected zone that can cause inter-granular corrosion by changing grain structure of the body material.
- No post weld heat treatment that can cause distortion in the valve body leading to piston misalignment.

- The jacket does not need to be removed to service the valve.
- If the valve needs to be replaced, the jacket can be reused offering substantial savings.
- Standard Strahman Valves are purchased, not custom fabrications.
- Quick deliveries with many standard jackets in stock.

An option for the CSI Heat Jacket is the use of electrical energy as a heating medium instead of Steam or Heat Transfer Fluids. At lower temperatures, the electrical CSI Heat Jacket maintains a constant temperature, more accurately, than steam or transfer fluids.

Accessories for the Heat Jackets are:

1. Custom formed Insulation Blankets conserve energy and also prevent personnel hazards from direct contact with a high temperature surface. Sold separately.
2. Special jumpers connect the two halves of the heat jacket easily and conveniently. Sold separately.
3. Heat Transfer Cement to fill in any voids between the jacket and the valve body. For most applications less than one quart is required. Sold separately.

For details on these custom accessories contact your Strahman Distributor to find out the extraordinary performance and value.

PED Compliant

The Strahman family of products also includes:

WASHDOWN EQUIPMENT

Strahman has a full line of mixing unit-hose stations, transfer hoses, nozzles and accessories.
Request our Washdown Equipment catalog.

PROCESS VALVES

Strahman has the capability of manufacturing custom process valves for all industries, particularly the polymer industry, including diverter valves, in-line valves, drain valves and stop valves, all designed to meet the particular (or customer) requirements for high pressure and temperature systems.

SAMPLING VALVES

Strahman has a full line of sampling valves that produce live samples without exception.
Our sampling valves are designed to prevent failure caused by sediment or clogging.

DRAIN VALVES

Strahman Drain Valves are designed so that they cannot clog. They are ideal for use in liquid and gas service or with slurries and high viscosity fluids which may solidify at room temperature.

LINE BLIND VALVES

Strahman Line Blind Valves provide zero leakage and total isolation on process pipelines, vessels and maritime applications. No pipeline movement is required when blind position is changed.

Contact your Strahman representative for complete details.
